acceleration, 38, 41
accuracy, 32
achievement potential, 54
action effect hypothesis, 217, 340
action observation, 332
action plan reconstruction hypothesis, 407
action preparation, 179–203
  alertness of performer, 189–190
  definition, 181
  end-state comfort control, 198
  force control, 196–198
  foreperiod length regularity, 185–186
  fractionating RT, 191–193
  Hick's law, 181–183
  limb movement characteristics, 195–196
  movement accuracy, 187
  movement complexity, 186–187
  movement sequence preparation, 198–199
  movement time (MT), 190–191
  number of response choices, 180–182
  postural preparation, 193–195
  predictability of correct response choice, 182
  probability of precue correctness, 182–184
  reaction time (RT), 180–182, 188–191
  repetition of movement, 188
  rhythmicity preparation, 199–201
  stimulus-response compatibility, 184–185
  vigilance, 190, 191
action theory, 102
actions. *See* motor skills
adaptability, 264
AE. *See* absolute error (AE)
afferent neurons, 72
affordance, 110, 111
alertness of performer, 189–190
alpha motor neurons, 73
alpha waves, 44
analogies, 343
angle-angle diagrams, 38, 40
angular motion, 38
anterolateral system, 80
anticipation timing, 57
anticipatory postural adjustments, 193–195
antiphase relationship, 50, 102
aptitude tests, 64
aqueous humor, 130
arousal, 210, 211
ascending tracts, 80, 81
assessment. *See* learning assessment
association areas, 75
associative stage, 280, 281
asymmetric bimanual coordination, 159
asymmetric limb coordination skills, 437–439
asymmetric transfer, 317–318
attention, 205–234
  automaticity, and, 219–220
  central-resource theories, 209
  definition, 207
  dual-task procedure, 214
  external focus of, 111–112
  focus, 215–219
  Kahneman's attention theory, 209–212
  multiple task performance, and, 208–214
  multiple-resource theories, 212–214
  training visual search strategies, 231
  and verbal instructions, 340–346
  visual search, and motor skill performance, 224–231
  visual selective attention, 220–224
  whole and part practice, 447–448
attention demand, reduction in, 265
attention process, 338
attention switching, 217
attentional focus, 215–219
attractors, 103–104
auditory cues, 443–444
auditory modeling, 337
augmented feedback, 352–390, 438, 439
  availability of, 271
  based on error size, 363–364

badminton serve, 224–225
balance, 55–57
dynamic, 56, 57, 63
falls among elderly and, 60
static, 56, 57, 62–63
balance bicycle, 442
balance training therapy, 372
basal ganglia, 77
basal nuclei, 77
baseball batting, 164–166, 225–227
baseball pitching, 238
basketball free throw, 229
basketball shooting, 227–228
BBS (Berg Balance Scale), 56
BCIs (brain-computer interfaces), 76
behavior reproduction process, 338
Berg Balance Scale (BBS), 56
Bernstein's learning process, 284–285
beta waves, 44
bias problem, 33, 35
bilateral transfer, 316–322
cognitive explanation of, 318–319
definition, 316, 317
experimental evidence of, 316–317
motor control explanation of, 319–322
symmetry *vs.* asymmetry, 317–318
training for using an upper-extremity prosthesis, 320–321
bimanual coordination, 158–160
bimanual coordination skills, 158–160, 439
binocular vision, 132, 134–136
biofeedback, 373
body orientation, 20
body stability, 20
body-weight support (BWS) system, 442
bone-plating surgical task, 438
bottleneck theory, 208
brain, 73–79
brain activity, 295–297
brain activity hypothesis, 459–461
brain activity measures, 44
brain-computer interfaces (BCIs), 76
brainstem, 78–79
brainstem pathways, 80
BWS (body-weight support) system, 442

■

caloric costs, 291
capacity, of working memory, 240
car driving. *See* driving a car
catching moving objects, 160–163
phases, 160–161
vision, 161–163
catch-up pattern, 102
caudate nucleus, 77
CE. *See* constant error (CE)
ceiling effects, 276
cell phone use, and driving, 213
center of mass (COM), 287–288, 372
center of pressure (COP), 372
central executive, 238
central nervous system (CNS), 73–82
brain, 73–79
brainstem, 78–79
cerebellum, 78, 79
cerebrum, 73–78
diencephalon, 78
limbic system, 79
motor unit, 80–82
muscle spindles, 120–121
spinal cord, 79–80
central pattern generators (CPGs), 166–167
central vision, 136–137
central-resource theories of attention, 209–212

cerebello-thalamo-cortico (CTC) pathway, 78
cerebellum, 78, 79
cerebral cortex, 73
cerebral hemispheres, 73
cerebrum, 73–78
CFS. *See* contralateral (right) footstrike (CFS)
challenge point hypothesis, 405
choice reaction-time task, 181
choice RT, 30–31
ciliary muscle, 130
CIMT (constraint-induced movement therapy), 153
classification of motor skills, 12–22
  Gentile's taxonomy, 14–22. *See also* Gentile's taxonomy of motor skills
  one-dimension systems, 9–14
  open/closed classification system, 12–14, 19
closed skill, 12, 13, 19
  learning stages, 283
  varying practice conditions, 396, 397
closed-loop control, 148–149
closed-loop control system, 94, 95
cluttered environment, 228–229
CNS. *See* central nervous system (CNS)
cocktail party phenomenon, 212
cognitive confusion, 315
cognitive effect, 210
cognitive effort, 422, 427
cognitive explanation of bilateral transfer, 318–319
cognitive hypothesis, 461
cognitive mediation theory, 337–338, 339
cognitive processing characteristics, and practice specificity, 412–413
cognitive skill, 6
cognitive stage, 280, 281, 343
collaterals, 72
collective variables, 105
COM (center of mass), 287–288, 372
complementary theory, 110–112
complexity, 434–436
  characteristics, 436
  definition, 434, 435
  whole *vs.* part practice, 435–436
concurrent augmented feedback, 374–376
  learning effects, 376
cones, 131
confusion, 247
conscious attention, 292–294
consistency, 264, 272
consistency problem, 33, 34
constant error (CE), 33
constant practice, 393–394, 395
constrained action hypothesis, 218–219
constraint-induced movement therapy (CIMT), 153
contextual interference, 398–399
  to skill learning contexts, 427
contextual interference effect, 399
  accounting for, 407–408
  action plan reconstruction hypothesis, 407
  definition, 399
  elaboration hypothesis, 407
  implications for practitioner, 406
  influences judgments about learning, 402
  learner characteristics, 405–406
  limits, 402–406
  motor skill characteristics, 402, 404–405
  outside laboratory, 400–402
  physical therapy, 404
  research evidence for, 399–402
continuous relative phase, 50
continuous skills, 11, 429, 436
contralateral (right) footstrike (CFS), 40
contralateral takeoff (CTO), 40
control center, 94
control parameters, 105–106
coordination, 91–92
Coordination and the degrees of freedom problem, 93
coordination control, 127–128
coordination dynamics, 272
coordination dynamics theory, 102
coordination measurement, 48–50
coordinative structures, 106–109
coordinative structures developed through practice, 109
COP (center of pressure), 372
cornea, 129
correction capability, 294–295
cost-benefit trade-off, 183–184
CPGs (central pattern generators), 166–167
cross-correlation technique, 48
cross-transfer, 316
CTC. *See* cerebello-thalamo-cortico (CTC) pathway
CTO. *See* contralateral takeoff (CTO)

■

deafferentation, 123–125
deautomatization-of-skills hypothesis, 219
declarative knowledge, 243
decussation, 80
degrees of freedom, 92, 93, 287–289
degrees of freedom problem, 92–93
deliberate practice, 299, 300
delta waves, 44
demonstration, 326–330. *See also* verbal instructions
  neural basis for observational learning, 333–339
  observing skilled, 334
  point-light technique, 328, 329
  skill characteristics and, 332–333
  skilled, 330–333
  timing and frequency of demonstrating a skill, 335–337
  verbal cues, 347–349
  verbal instructions, 340–349. *See also* verbal instructions
  visual perception of motion, 329
dendrites, 71–72
descending tracts, 80, 81

descriptive KP, 367–368
diencephalon, 78
discrete motor skill, 11, 436
discrete skills, 429
discrimination reaction-time task, 181
discrimination RT, 30–31
discus throw, 136
displacement, 37–38
distributed practice, 423–428
distributed schedule, 423
diversification, 282–283
dopamine, 77
dorsal column, 80
dorsal horns, 79, 80
driving a car
  cell phone use, and, 213
  spatial location change, 313
  standard shift, experience and attention demands, 294
  visual search, and motor skill performance, 228
dual-task procedure, 214–215, 275
duration
  long-term memory, 242
  working memory, 238–239
dynamic balance, 56, 57, 63
dynamic balance skills, 420
dynamic flexibility, 62
dynamic strength, 62
dynamic view of modeling, 338–339
dynamical systems theory, 102–110
  attractors, 104–105
  bilateral transfer, 319–321
  control parameters, 105–106, 107
  coordinative structures, 106–109
  definition, 103
  motor program theory, compared, 110
  nonlinear changes in movement behavior, 102–103
  order parameters, 105–106
  perception-action coupling, 109–110
  self-organization, 106, 107
  stability, 104–105

FAB (Fullerton Advanced Balance Scale) 59
fading technique, 380
feature integration theory, 223–224
feedback, 94, 95
filter theory of attention, 208
fine motor skill, 11
Fitts' law, 147–148, 150
  drinking from a mug, 154
  movement accuracy, 187
  prehension, and, 155–156
Fitts/Posner three-stage model of learning, 280–282
fixation, 282–283
flexible capacity, 210
floor effects, 276
fMRI (functional magnetic resonance imaging), 46–47
force control, 196–198
foreperiod, 186, 187
forgetting, 244–250. *See also* memory
fovea centralis, 131
fractionating RT, 191–193
fractionization, 437–439, 442
freezing the degrees of freedom, 287–289
frontal lobe, 74
Fullerton Advanced Balance Scale (FAB), 59
function of the action, 20–21
functional equivalence hypothesis, 459
functional magnetic resonance imaging (fMRI), 46–47
functional skills, 145–178
  bimanual coordination skills, 158–160

catching a moving object, 160–163
handwriting, 157–158
functional magnetic resonance imaging (fMRI)—*Cont.*
locomotion, 166–174. *See also* locomotion
prehension, 152–157
speed-accuracy skills, 146–152
striking a moving object, 163–166
fundamental motor skills, 11

■

gait transitions, 169
gamma motor neurons, 73
general index of accuracy, 33
general motor ability hypothesis, 54–55
generalized motor program (GMP), 96–102
bilateral transfer, 319
invariant features/parameters, 97–99
relative-time feature, 100
Schmidt's schema theory, 99–100
Gentile's taxonomy of motor skills, 14–22
environmental context, 16–18
function of the action, 20–21
intertrial variability, 17
nonregulatory conditions, 18–20
physical education, 21
physical therapy, 21
practical application, 22
regulatory conditions, 16–17
transfer of learning, 307–309
Gentile's two-stage model of learning, 282–284
initial stage of learning, 282, 283
later stages of learning, 282–284
globus pallidus, 77
GMP. *See* generalized motor program (GMP)
